¶6. The following is general information pertaining to security and health considerations throughout the Eastern Caribbean:

SECURITY

In the Eastern Caribbean, foot travel outside of well-established tourist areas is not generally recommended, especially at night. Be vigilant when using public telephones or ATM facilities near roadsides or quiet areas. As in many U.S. metropolitan areas, wearing expensive jewelry, carrying expensive objects, or carrying large amounts of cash should be avoided. Visitors should also safeguard valuables while at the beach. While hotels are generally safe, many visitors have experienced loss of unattended items. Hotel burglaries are not uncommon and all valuables should be

locked in room safes.

HEALTH INFORMATION

In Barbados, Saint Lucia and St. Vincent, the major health threat is dengue fever, transmitted by the Aedes Aegypti mosquito. Persons should therefore protect themselves with insect repellent. There is also a growing incidence of HIV/AIDS. The Eastern Caribbean enjoys clean and safe drinking water. Only routine boosters for immunizations, i.e., Tetanus, Diphtheria, Pertussis and oral polio vaccine are required when traveling to this region. It takes several weeks to become accustomed to the heat and humidity. Prolonged exposure to the sun, without protection, causes sunburn, and may ultimately result in sun-damaged skin or even skin cancer. Sunscreen or sunblock should be used for protection. Barbados has the best medical facilities of all the islands of the Eastern Caribbean, and most of the medical specialties have practitioners here.
